Fintech engineering student | Aspiring Quant Researcher/Trader | Strong focus on data-driven finance & systematic strategies

EDUCATION

ESILV – Léonard de Vinci Graduate School of Engineering <i>Master's Degree in Engineering – Major in Fintech</i>	Paris, France 2024 - 2027
- Specialization in financial technologies, with quantitative finance, algorithmic trading, blockchain, and data science. - Relevant courses: Financial Markets, Python for Finance, Machine Learning, Cryptography.	
High School Saint-Joseph <i>BTS SNIR – Advanced Technician Degree in Computer Science and Networks</i>	Dijon, France 2023 - 2024
- Focus on software development, embedded systems, and network infrastructure. - Developed a connected IoT system as part of the final project.	
ESEO – Grande École of Engineering <i>Preparatory Year (Integrated Engineering Program)</i>	Dijon, France 2022 - 2023
- Intensive curriculum in mathematics, physics, and computer science. - Built a solid foundation in problem-solving and analytical thinking.	

EXPERIENCE

Dowsers Finance <i>Blockchain Engineer – Apprentice</i>	Paris, France 2024 - Present
- Developed risk models for stablecoin classification using Python, Chainlink oracles, and on-chain price data to assess volatility. - Built analytics pipelines to monitor token holder concentration and detect abnormal market behaviors. - Automated the generation of structured risk & audit reports (JSON → LaTeX → PDF/Excel) for quantitative analysis. - Contributed to data tooling for token risk, price volatility, and governance exposure in DeFi markets.	
Kryptosphere – Student Blockchain Association <i>Head of Events – Student Club</i>	Paris, France 2024 - Present
- Organized educational workshops and networking events with industry professionals. - Built partnerships with blockchain companies and ensured event logistics.	
SingularityLabs (Freelance) <i>Founder – AI Automation Developer</i>	Paris, France 2024 - Present
- Designed and implemented AI-driven automation workflows for data analysis, reporting, and client decision support. - Built intelligent agents and pipelines (Python, JavaScript, no-code tools) to improve operational efficiency across industries.	

ADDITIONAL INFORMATION

- Certifications: Bloomberg Market Concepts (BMC), Columbia University “Learning AI Through Visualization”
- Projects: Polymarket Arbitrage Bot (prediction market arbitrage, backtests, API data), Quantitative strategy scripts (Black-Scholes, volatility models), Machine Learning for financial data (GitHub)
- Technical Skills: Python, C++, SQL, Pandas, NumPy, Scikit-learn, LaTeX, Git; also experienced with Java, Solidity, Rust, Excel/VBA, n8n, Make
- Languages: French (native), English (professional proficiency)
- Interests: Quantitative finance, financial markets, macro trading, algorithmic strategies, AI applied to finance
- Former semi-professional esports player – developed strong decision-making skills, discipline, and competitive mindset.
- Driving license: Category B
